

RAJAT YADAV

DevOps Engineer | Terraform & Azure Enthusiast

rajatyadav879536@gmail.com • +91 8795367563 • Varanasi, Uttar Pradesh • linkedin.com/in/rjt-yadav

SUMMARY

Aspiring DevOps Engineer and B.Tech Computer Science student with practical experience in Microsoft Azure, Terraform, Linux, Docker, Git, and CI/CD fundamentals. Skilled in Infrastructure as Code (IaC), cloud resource provisioning, Azure infrastructure management, and automation through hands-on projects and lab environments. Passionate about cloud technologies, DevOps practices, and building secure, scalable, and reliable infrastructure solutions.

TECHNICAL SKILLS

Cloud & Azure: Microsoft Azure, Azure Resource Group, Azure Storage Account, Azure Hierarchy (Management Group, Subscription, Resource Group)

Terraform & IaC: Terraform, Provider Configuration, init / validate / plan / apply, State File (Local & Remote), Remote Backend Setup, State Locking, Variables & tfvars, Variable Types (string, number, boolean, list, map), Looping (count, for_each), Dependency Management (Implicit & Explicit), File Structure (provider.tf, variables.tf, main.tf, output.tf), Basic Modules

Tools & Platforms: Azure CLI, VS Code, PowerShell, GitHub (Basic), Linux (Basic)

Currently Learning: CI/CD Concepts, Docker Fundamentals, Kubernetes Fundamentals, Trunk-Based Branching

INTERNSHIP

DevOps Intern — DevOps Insider

Remote | December 2025 – Present

- Learning Terraform and Microsoft Azure through structured, hands-on practical implementation
- Created Azure Resource Groups and Storage Accounts using Terraform and IaC workflows
- Configured remote backend using Azure Blob Storage for centralized state management
- Practiced Terraform state management, state locking, and backend configuration concepts
- Implemented variables, dependency management, and looping constructs (count, for_each) in Terraform
- Gained foundational understanding of Infrastructure as Code (IaC) principles and DevOps workflows

KEY PROJECTS

Azure Infrastructure using Terraform

- Provisioned Azure Resource Groups and Storage Accounts using Terraform
- Automated infrastructure deployment using Infrastructure as Code principles
- Implemented remote backend configuration for centralized state management
- Managed Terraform state securely and validated resources through Azure Portal

HealthPulse – Production-Ready Healthcare Platform

- Provisioned Azure infrastructure using Terraform and IaC best practices
- Built modular Terraform code with reusable modules and environment configurations
- Deployed VNet, Subnets, NSGs, Azure Bastion, Load Balancer, and VMs
- Configured Linux VMs, SSH access, and Nginx web hosting
- Implemented secure networking using NSG rules and Azure Landing Zone concepts

EDUCATION

B.Tech - Computer Science and Engineering (CSE)

Hindustan College of Science and Technology (HCST) | 2023 – 2027

Class XII (Intermediate) - 72.80%

Sangram Inter College, Ghazipur | 2022 – 2023
