

RAJAT YADAV

Aspiring DevOps & Cloud Engineer | Azure • Terraform • IaC • Linux

rajatyadav998424@gmail.com • +91 8795367563 • Varanasi, Uttar Pradesh • [LinkedIn](#) • [GitHub](#)

SUMMARY

Aspiring DevOps Engineer and B.Tech CSE student with hands-on experience in Microsoft Azure, Terraform and Linux, gained through internship and projects. Skilled in Infrastructure as Code (IaC), modular Terraform, remote state with state locking, and Azure networking (VNet, NSG, Azure Bastion, Load Balancer). Experience with CI/CD (GitHub Actions, Azure DevOps) and Docker; learning Kubernetes. Seeking a DevOps or Cloud Engineer role.

TECHNICAL SKILLS

Cloud & Azure: Virtual Network (VNet), Subnets, NSG, Azure Bastion, Load Balancer, Virtual Machines, Storage Account, Blob Storage, Resource Groups, Management Groups & Subscriptions, Azure Portal

Infrastructure as Code: Terraform, Modules, Remote Backend (Azure Blob), State File & State Locking, Variables & tfvars, Variable Types (string, number, boolean, list, map), count & for_each, Implicit & Explicit Dependencies

Linux & Tools: Linux, SSH, Nginx, Azure CLI, PowerShell, Git, GitHub, Docker, CI/CD (GitHub Actions, Azure DevOps)

Currently Learning: Kubernetes Fundamentals, Trunk-Based Development

INTERNSHIP

DevOps Intern — DevOps Insider

December 2025 – Present

Remote

- Provisioned Azure Resource Groups and Storage Accounts using Terraform and Infrastructure as Code (IaC) workflows
- Configured a remote backend on Azure Blob Storage with state locking for centralized, safe Terraform state management
- Built reusable, environment-specific configurations using input variables, tfvars, count and for_each
- Managed implicit and explicit resource dependencies; validated deployed resources through Azure Portal and Azure CLI

KEY PROJECTS

HealthPulse – Azure DevOps Infrastructure Automation | [GitHub](#)

- Designed modular Azure infrastructure using Terraform modules, environment-specific configurations and IaC.
- Provisioned Azure VNet, Subnets, NSGs, Azure Bastion, Load Balancer and Linux VMs in a multi-tier network layout.
- Secured access with NSG rules and Azure Bastion (Azure Landing Zone concepts); configured SSH and Nginx on Linux VMs and integrated web servers with Azure Load Balancer.
- Automated Terraform fmt, validate, plan and apply using GitHub Actions CI/CD workflows.
- Implemented an Azure DevOps Pipeline for automated infrastructure deployment.
- Containerized the application with Docker and deployed it on Linux VMs in Azure.

Azure Infrastructure using Terraform | [GitHub](#)

- Built Terraform configurations to provision Azure Resource Groups and Storage Accounts.
- Implemented typed variables, tfvars, Terraform modules and Azure Blob remote backend for state management.
- Used Terraform init, validate, plan, apply and destroy workflows, reviewing the plan before applying changes.

CERTIFICATIONS

Introduction to the Basics of Azure Services

August 2026

EDUCATION

Bachelor of Technology (Computer Science & Engineering)

August 2023 – July 2027

Hindustan College of Science & Technology, Mathura, Uttar Pradesh

Affiliated to Dr. A.P.J. Abdul Kalam Technical University, Lucknow, Uttar Pradesh

Class XII (Intermediate) – 72.80%

April 2022 – May 2023

Sangram Inter College, Ghazipur, Uttar Pradesh

Class X (High School) – 89.17%

April 2020 – May 2021

Mata S D U M V, Ghazipur, Uttar Pradesh
