Professional Summary

DevOps-focused Computer Science Engineering student with hands-on experience in **Microsoft Azure, Terraform, Docker, Linux, Git, GitHub Actions, and CI/CD**. Experienced in provisioning Azure cloud infrastructure using **Infrastructure as Code (IaC)**, configuring networking resources, containerizing Python applications, and implementing automated CI/CD workflows. Interested in **DevOps Engineering, Azure Cloud Engineering, and Terraform-based Infrastructure Automation**.

Technical Skills

Cloud:	Microsoft Azure, Resource Groups, Virtual Networks, Subnets, Network Security Groups, Virtual Machines, Load Balancer, NAT Gateway, Azure Storage
Infrastructure as Code:	Terraform, AzureRM Provider, Terraform Modules, Variables, Outputs, Infrastructure as Code (IaC)
DevOps & CI/CD:	GitHub Actions, CI/CD Pipelines, Automated Testing, Build Validation, Terraform Validation
Containers:	Docker, Dockerfile, Docker Images, Docker Containers
Programming:	Python, Flask, Bash, PowerShell
Operating Systems:	Linux, Ubuntu, Windows
Version Control:	Git, GitHub
Testing:	Pytest, Application Health Checks

Experience

DevOps Intern

DevOps Insiders

December 2025 – Present

Remote

- Worked with Microsoft Azure services including Resource Groups, Virtual Networks, Subnets, Network Security Groups, Virtual Machines, and Azure Storage.
- Provisioned and managed Azure infrastructure using **Terraform** and the AzureRM provider following Infrastructure as Code practices.
- Created and validated Terraform configurations using variables, resources, dependencies, and reusable infrastructure patterns.
- Used Azure CLI, PowerShell, Linux, and Git for cloud infrastructure management and development workflows.
- Practiced CI/CD automation using GitHub Actions for application and infrastructure validation.

Projects

CloudOpsHub – Azure DevOps Infrastructure Automation

Terraform — Azure — Docker — GitHub Actions — Python

- Built a **Python Flask** application with application endpoints for health monitoring and server information.
- Containerized the Flask application using **Docker** and created reproducible application images using a Dockerfile.
- Provisioned Azure infrastructure using **Terraform**, including Resource Group, Virtual Network, Subnets, Network Security Groups, NAT Gateway, Load Balancer, and Linux Virtual Machine.
- Implemented **GitHub Actions CI/CD** to automate Python testing, Docker image building, application health validation, and Terraform validation.
- Configured Azure cloud infrastructure using **Infrastructure as Code (IaC)** instead of manual cloud provisioning.
- Deployed and validated the containerized application on an **Azure Linux Virtual Machine**.

HealthPulse – Production-Ready Healthcare Platform

Azure — Terraform — Linux — Nginx — Node.js — MongoDB

- Developed a monolithic healthcare application with backend APIs, frontend interface, and healthcare-related application modules.
- Provisioned Azure infrastructure using **Terraform**, including Resource Group, Virtual Network, Subnet, Network Security Group, and Virtual Machine.
- Configured an **Ubuntu Linux VM** and deployed the application using Nginx as a web server and reverse proxy.
- Used Git and GitHub for source-code management and maintained environment-specific infrastructure configurations.

Education

Bachelor of Technology (B.Tech) – Computer Science and Engineering

Hindustan College of Science and Technology (HCST), Mathura

2023 – 2027

AKTU

Additional Information

Career Focus:	DevOps Engineering, Azure Cloud Engineering, Terraform Infrastructure Automation
Interests:	Cloud Infrastructure, Infrastructure as Code, CI/CD Automation, Containerization
